

Interlock system ensures stability and safety.
The mechanical principle to achieve interlock is simple and effective in preventing more than one drawer being opened at the same time, thereby minimizing the risk of tipovers.

Per regolare l'altezza del cassetto agire come mostrato nel disegno.

To adjust the height of the drawer, proceed as shown in the drawing.

Pour régler la hauteur du tiroir, procédez comme indiqué sur le dessin.

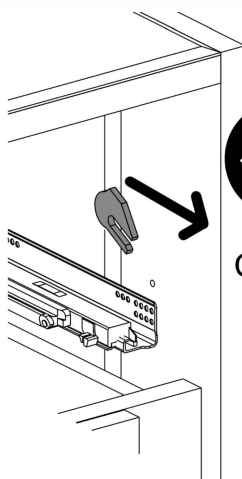

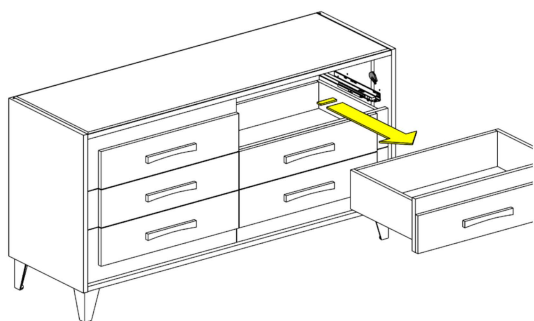

Um die Höhe der Schublade zu verstellen, gehen Sie wie in der Zeichnung gezeigt vor.

Nel mobile è installato il sistema di antiribaltamento. Tale sistema impedisce l'apertura di più cassetti contemporaneamente, permettendone l'apertura di uno solo alla volta. Qualora un cassetto venisse estratto dal mobile, prima di reinserirlo bisogna fare attenzione a riportare il sistema di antiribaltamento nella sua posizione originale. (Vedi disegno)

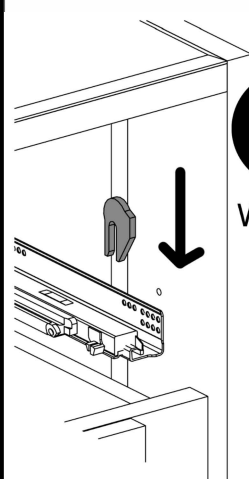

The item is equipped with an anti-tip system. This system prevents the opening of multiple drawers at the same time, allowing only one to be opened at a time. If a drawer is removed from the item, before reinserting it, be careful to return the anti-tip system to its original position. (See drawing)

Le système anti-basculement est installé dans le meuble. Ce système empêche l'ouverture de plusieurs tiroirs en même temps, permettant d'en ouvrir un seul à la fois. Si un tiroir est retiré du meuble, avant de le réinsérer, veillez à remettre le système anti-basculement dans sa position d'origine. (Voir dessin)

Das Kippschutzsystem ist im Schrank eingebaut. Dieses System verhindert das gleichzeitige Öffnen mehrerer Schubladen, sodass jeweils nur eine geöffnet werden kann. Wenn eine Schublade aus dem Möbel entfernt wird, achten Sie vor dem Wiedereinsetzen darauf, dass das Anti-Kipp-System wieder in seine ursprüngliche Position zurückkehrt. (Siehe Zeichnung)
